VERITEC AG
Anlagen- und Gerätebau

// PLANT CONSTRUCTION

Description

"We live what we do " Plant and equipment is our core competence.
We plan and design with CAD systems in 2D and 3D. Through our own in-house manufacturing to installation and commissioning can occur many interface problems and not be detected in advance. The customer can feel it in the competence of our work. We are used to evaluate technical solutions and deliver a concept with overall responsibility for our prospects and customers. We attach great importance to fully support prior to, during and after the project and remain for years a competent partner for the equipment supplied to our customers. Our structures are organized and occupations to ensure all staff levels. Be it in the first contact with our sales, the detailed engineering in the design with downstream manufacturing, up to and including the final assembly and commissioning and after-sale service.

Benefits

- Engineering / Manufacturing / Assembly = An interface for the customer
- Customer knowledge and experience in the customer project encouraged
- Our reliable and dedicated way of working ensures a successful customer project
- Broad technical knowledge of our long-standing team of experts
- Guaranteed fast response times (organized representation)
